

ESG Edge

Fostering a new era of non-financial intelligence by turning generative AI into a catalyst for unprecedented access to market data

ESG Edge links data back to its sources, enhancing trust, aiding informed decision-making, and enabling auditability. It also enables time series analysis for robust trend analysis and forecasting.

Key Highlights

>1000x Faster

Than ESG analysts across portfolios

Near 100% Coverage

On all records across all portfolio companies

>90% Accuracy

Across all records

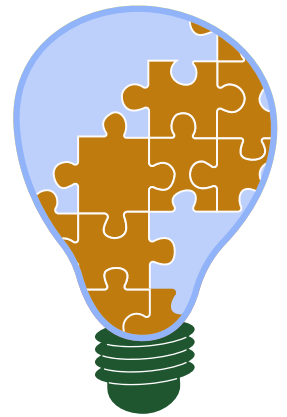

Challenge

Sustainability information frequently lacks completeness, with significant gaps in company coverage, available records, and source trans-parency. Additionally, risk analysis is hindered by inflexible reliance on often disputed third-party ratings, especially in an increasingly strin-gent regulatory environment.

Traditional research methods are manually intensive and time consuming, requiring several hours to form a well-rounded view of a single company from multiple data sources.

Solution

By harnessing generative AI through Purple Fabric, ESG Edge allows users to interrogate entire portfolios with a single query, delivering transformative insights at a company or portfolio level. ESG Edge is data source agnostic, able to read company disclosures, news, and more for complete insights.

Results

ESG Edge allows clients to leverage non-financial data in their proprietary context for risk prediction, reporting, compliance, portfolio management, impact assessment or pricing. It provides actionable insight with transparency and depth.
